Summary: AgriScience is a series of courses designed to expose students to exciting and diverse agricultural careers! There is a growing demand for recent college graduates entering the workforce in the agricultural sector. There are an estimated 57,900 high-skilled job openings annually in the food, agriculture, renewable resources and environmental fields in the United States. According to the 30th U.S. Secretary of Agriculture, Tom Vilsack, “Those receiving degrees in agricultural fields can expect to have ample career opportunities . . . These jobs will only become more important as we continue to develop solutions to feed more than nine billion people by 2050.” It is an exciting time to be preparing for a career in the agricultural industry!

Agriscience 6 is the first Agriscience class that students will have. It is important that students understand what agriculture is in order to understand the content and be successful in their other Agriscience courses.
Each grade level will include a 10 week course in AgriScience.

Key Topics: Students will be addressing what natural resources are needed for agriculture as to better help them identify and classify natural resources.
Other units include Sustainable Agriculture, and a Culminating Activity.
